BLS PC 5575 P

HIGH DENSITY POLYETHYLENE BLACK COMPOUND FOR STEEL PIPE TOP COATING

DESCRIPTION

BLS Polymers Ltd. introduces another sophisticated compound in powder form for top coat of 3 layer steel pipe coating – **BLS PC 5575 P** a HDPE based Black Coating Compound totally protected against thermal degradation and having excellent weathering resistance. This compound is made from specially selected HDPE resin, carbon black and is RoHS compliant that provides a balance of toughness, low shrinkage, high moisture barrier, high abrasion resistance, excellent weathering resistance, excellent chemical resistance, high ESCR, heat deformation resistance, low friction for easy pulling during installation, easy processability than conventional compounds. This compound meets the stringent quality requirements for Top Coat of 3 layer Coating of Steel Pipe coating. **BLS PC 5575 P** has a maximum design temperature of 80°C and minimum design temperature is -40°C.

APPLICATION

BLS PC 5575 P is a readymade compound in powder form fully stabilized against influence of UV rays of sunlight, oxygen in air, moisture and heat (due to environmental temperature up to +80°C). **BLS PC 5575 P** is recommended for top coat application for 3 LPE Steel Pipe to protect against galvanic corrosion.

BLS PC 5575 P is intended to fulfil National and International standards, when appropriate industrial manufacturing standard procedures and practices are applied and a continuous quality system is implemented and when used in combination with maleic anhydride grafted co-polymeric adhesive (**BLS PC 1009 MP**) or other grafted co-polymeric adhesive and a compatible fusion bonded epoxy.

- Termite Repellent version
- Rodent Repellent version Type equation here.
- Termite and Rodent Repellent version
- Natural and Colored UV Stabilized Compound are also available on request.

PROCESSING CONDITION

Recommended Processing Condition for **BLS PC 5575 P**:

We recommend that material is pre-dried at 90°C for a minimum time of 2 hours for best performance due to the hygroscopic nature of carbon black.

As a start - up we suggest set the following temperature profile

Melt Temperature: 210 - 240°C

Max Recommended Melt Temperature: <260°C

However, actual temperature profile will depend upon the screw compression ratio, L/D ratio, size of the pipe, type of application technique flat or crosshead die, etc.

PACKAGING:

BLS PC 5575 P is available in 25 kg Laminated Woven Sack with additional PE Liner, 650 kg Bulk Bags with additional PE Liner, 650 kg Paper Board Octabin with additional PE Liner.

SHELF LIFE

BLS PC 5575 P must be stored in ambient temperature (not exceeding 50 deg C) in a shaded area in sealed and intact bags to avoid exposure to sunlight and moisture. Long storing may affect the property of the compound and for this reason should be used within 24 months from the compounding date. It is better to measure the moisture on long storage and dry the material before use after long storage.

SAFETY

The product is not classified as a hazardous preparation.

Dust and fines from the product carry a risk of dust explosion. All equipment should be properly earthed.

Inhalation of dust should be avoided as it may cause irritation of the respiratory system. Small amounts of fumes are generated during processing of the product. Proper ventilation is therefore required.

Please refer to our MSDS for details on various aspects of safety, recovery, disposal and handling of the product.

RECYCLING

The product is suitable for recycling using various methods of shredding and cleaning in-house production waste should be kept clean to facilitate direct recycling.
